

Veracitor VX Series
Diesel and LP Gas Forklift Trucks
2,000kg, 2,500kg, 3,000kg and 3,500kg

- Intellix Vehicle Management System
- 4 application matched transmissions, including the Worlds' best hydrodynamic transmission - the Yale Techtronix 200X
- Oil immersed brakes
- ADS - Auto Deceleration System on Techtronix 100 transmission
- Anti Roll Back
- CANbus technology
- Accutouch minilevers, Palmtech™ joystick and manual levers
- Supercushion, pneumatic and Michelin XZM radial tyres

Mast

A full range of Yale Hi-Vis 2 stg LFL and 2 and 3 stage FFL masts are available.

Yale hi-vis masts are designed for maximum visibility, with widely spaced channels, lift chains and main lift cylinders.

Options

- Powertrain protection system
- Premium monitoring package
- High air intake with pre-cleaner
- Accumulator
- Keyless start (with auxiliary key switch)
- Traction speed limiter
- Heavy-duty "Combi Cooler" radiator
- Swing-out, drop-down EZ-Tank bracket
- Return-to-set tilt
- Swivel full suspension seat
- Foot directional control
- Operator password
- Alarm-reverse
- Amber strobe light - continuous activated
- Impact monitor
- Load weight indicator
- Oil immersed brakes

Engine Specifications

Yanmar TNE serie, Diesel

Base, Value, Productivity

4 Cylinder Overhead valve
 Displacement 2.6 litre
 Torque 146 Nm @ 1400 RPM
 Kw 35.8kW @ 2450 RPM
 Air filtration Two stage, dry type
 IDI fuel injection system

Yanmar TNE serie, Diesel

Base, Value, Productivity

4 Cylinder Overhead valve
 Displacement 3.3 litre
 Torque 210 Nm @ 1700 RPM
 Kw 48.5 kW @ 2400 RPM
 Air filtration Two stage, dry type
 IDI fuel injection system

Mazda FE, LPG

Base

4 Cylinder Camshaft Overhead Valve
 Displacement 2.0 litre

Torque 124 Nm @ 1800 RPM
 Kw 32.8 kW @ 2700 RPM
 Air filtration Two stage, dry type
 Emission Control Closed loop

Mazda F2, LPG

Value

4 Cylinder
 Displacement 2.2 litre
 Torque 146 Nm @ 1800 RPM
 Kw 38 kW @ 2700 RPM
 Air filtration Two stage, dry type
 Emission Control Closed loop

GM, LPG

Productivity

4 Cylinder Camshaft Overhead Valve
 Displacement 2.4 litre
 Torque 167 Nm @ 2650 RPM
 Kw 46.2 kW @ 2700 RPM
 Air filtration Two stage, dry type
 Emission Control Closed loop

Yale Veracitor™ VX Series

This series of trucks is available in three configurations.

The Veracitor™ Base truck offers first-rate performance for standard-duty applications, geared to minimise cost of acquisition without compromising performance.

The Veracitor™ Value truck provides excellent performance for standard and medium-duty applications, optimised for lowest hourly operation cost.

The Veracitor™ Productivity truck delivers maximum performance for medium to heavy-duty applications with state-of-the-art features and industry leading power.

Engines

Engines feature a rigid cast iron block and main bearing caps.

Hydraulic valve lifters eliminate the need for manual adjustment. All engines include hardened exhaust valve seats, the GM engine's valves are stellite coated for superior durability. All engines are Tier 2 emissions compliant featuring closed loop emissions regulation systems that continually monitor exhaust and adjust fuel/air mix. The GM engine also features an electronic throttle for precise performance and control.

Fuel System

The Mazda LPG engine uses a single barrel non adjustable carburetor with an LPG injector and a regulator/vaporizer. The Engine Control Unit controls the LPG injector fueling.

The GM LPG use sequential port fuel injection, vaporiser/ regulator to convert fuel from a liquid to a gas for vapor injection. The Engine Control Unit (ECU) electronically controls the fuel/air mix, and spark advance to provide the necessary torque. The ECU inputs include manifold air pressure temperature, engine coolant temperature, accelerator pedal position, throttle position, engine speed, cam signal, and oxygen sensor signal.

The Yanmar fuel system has an Electro-mechanical controlled throttle providing excellent response time. Super quick glow plugs allow the engine to start quickly and reliably under cold conditions, the cold start device delivering a cleaner exhaust by advancing the fuel injection timing based on water temperature. Emissions have been reduced by controlling fuel injection timing according to engine load.

Transmission

Four transmission selections are available with multiple engine configurations for a wide variety of material handling applications.

1) Standard Electronic features electronic inching, electric shift control, neutral start

switch, anti-restart protection and heavy duty clutch packs.

A single pedal controls both inching and braking, optional dual inch/brake pedals are available if preferred. A 100 mesh suction and a 10 micron return line filtration protect the transmission from abrasive contaminants.

2) The Techtronix 100 has all the Standard Electronic features plus Auto Deceleration System through the controlled application of clutch packs, reduces tyre spin by precisely regulating engine speed during controlled power reversals.

3) The Techtronix 200 has all the Techtronix 100 features, plus Auto Speed Hydraulics with Automatic Inching Control. This automatically increases engine RPM as hydraulic functions are actuated, while maintaining control over vehicle speed. The throttle response management feature provides travel speed as a direct result of pedal position, improving truck control.

4) The Techtronix 200X has all the Techtronix 200 features, plus Two Speed Auto Shift (2 x forward, 1 x reverse). Extended drawbar pull and Dynamic Auto Deceleration System.

Cooling System

The cooling system employs a 43cm blade pusher-type fan. A permanently lubricated water pump and a high capacity, cross-flow radiator ensure rapid heat dissipation. The sealed cooling system operates at 15 psi, the coolant recovery tank allows visual inspection of coolant level. A transmission oil cooler is integrated into the radiator, located in the side tank. The optional combicooler radiator features an externally mounted transmission oil cooler for increased heat transfer capability. All radiators are soft mounted for durability.

Drive Axle

The drive axle is designed to withstand heavy-duty applications and absorb shock loads. It is a "self contained" assembly isolated from the transmission by a heavy-duty rubber isolator. The axle shafts utilize a "rolled fillet" root spline design for increased resistance to torsion stress. A magnetic sump plug collects any metal particles circulating in the axle oil to prevent component wear.

Brakes

Brakes are duo-servo hydraulic, self-energizing, and automatic adjusting drum brake assemblies. Asbestos-free brake linings are bonded to steel shoes operating in cast iron drums on the Base and Value models. The Productivity models have oil immersed brakes as standard. The single circuit master cylinder has sealed fluid reservoir and features a fluid level sensor

which activates an indicator light on the instrument panel.

Hydraulic Power Steering

Hydrostatic steering provides responsive control and eliminates mechanical linkages for reduced surface shock and simplified maintenance. The steering wheel is 30cm in diameter with a textured surface grip and spinner knob, and requires only four turns lock-to-lock. The centre mounted steer cylinder is located within the confines of the steer axle for protection.

Steer Axle

Constructed from cast steel, the steer axle is rubber shock mounted to the frame for reduced wear and vibration. The CSE (Continuous Stability Enhancement) system enhances lateral truck stability through reduced steer axle articulation, while simultaneously allowing uncompromised uneven surface travel.

Operator's Compartment

Base truck features cowl mounted hydraulic control levers positioned on the right side of the steering column.

Value and Productivity trucks feature Accutouch or Palmtech™ electrohydraulic controls integrated into the operator's right-side armrest for superior ergonomic actuation.

Automotive-style pedal arrangement with a large, single inch/brake pedal is standard.

Intellix Vehicle System Management (VSM) VSM acts as a master truck controller, providing extensive monitoring and control of truck functions and systems.

CANbus technology reduces wiring complexity and enables communications between truck systems. The dash display transmits continual feedback to the operator and allows communication of service codes. On-board diagnostics enable quick and easy troubleshooting. The electrical system features sealed connectors and Hall Effect sensors for superior dependability.

Hydraulic System

Hydraulic system incorporates a gear type pump with cast iron body for quiet efficiency. The system is protected from overloads by a main relief valve for the lift circuit and secondary relief valve for tilt and auxiliary functions. Oil is double filtered through a 100 mesh suction line strainer and 10 micron return line filter. Hydraulic tank is integrated into the frame.

For Accutouch or Palmtech™ joystick electrohydraulic controls, an emergency lowering valve is provided to allow the load to be lowered in the event of power loss. O-ring face seal fittings are used in all high pressure hydraulic connections.
